

Think and feel?

Frustrated: Managing food requests manually is time-consuming and inefficient.

Motivated: A digital system could really improve our work.

Anxious: What if staff and volunteers don't adapt to the new system?

Concerned: Will the new system be easy to use for everyone?

Overwhelmed: It's difficult to track everything with paper logs and spreadsheets.

Hopeful: With better tracking, we can serve more people effectively.

Excited: Real-time inventory tracking will make things so much easier!

Volunteers using paper logs for tracking food pickups and distributions.

No structured process for approving or declining food requests.

Admins struggling to consolidate food donation records in Excel.

Lack of visibility into real-time stock levels.

Community organizations calling RHS repeatedly to check food availability.

Inventory tracking errors are leading to shortages or waste.

Reports take too long to prepare and often have errors.

Other organizations are also facing the same challenges.

Why isn't there a centralized platform for food donations?

Slow reporting processes due to manual data entry.

Technology can streamline this process, but we need training.

I need an easier way to manage food requests and donations.

I wish we had a system that automatically logs food donations.

The reporting process takes too much time.

Our organization lacks transparency in food distribution.

It's difficult to keep track of food inventory manually.

I have to manually update records after every food distribution.

I want real-time insights into food stock levels.

Staff and volunteers struggle with manual logs.
